## DETAILED ACTION

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 2. Claims 1-9, 11-17, 19-23, 25-29 are rejected under 35 U.S.C. 102(a) as being anticipated by Fujioka. Referring to claims 1, 2, 4-6, 8, 9, 11-14, 16, 17, 19, 21-23, 25, 27-29, Fujioka discloses a secure electronic voting system wherein a voter enters their name and password prior to voting. Once the voter makes their choice the ballad is blinded (encrypted) using a public key and a random number (random information, tag). The voter also generates a secret key that is encrypted with the public key that is sent to the administrator (administrator apparatus) along with the blinded ballot, and the user name and password. The administrator checks the user name and password for authenticity (verifies voter apparatus) generates a signature and signs the package and sends it back to the voter. The voter checks the signature and then sends the signature and the encrypted package to the counter. The counter decrypts the package and checks the signature, and the sums and posts the results (Pages 246-248 of A Practical Secret Voting Scheme for Large Scale Elections by Fujioka).

Referring to claims 3,15, 20, 26, Fujioka discloses that the voter can check to list to make sure that his ballot is present (check tag, page 248).

Referring to claim 7, Fujioka discloses that the voter signs the message that includes the ballad and identification information (Page 247).

Page 3

3. Claims 1-30 are rejected under 35 U.S.C. 102(a) as being anticipated by Herschberg. Referring to claims 1-9, 11-17, 19-23, 25-29 Herschberg discloses a secure electronic voting system wherein a voter enters their name and password prior to voting. Once the voter makes their choice the ballad is blinded (encrypted) using a public key and a random number (random information, tag). The voter also generates a secret key that is encrypted with the public key that is sent to the administrator (administrator apparatus) along with the blinded ballot, and the user name and password. The administrator checks the user name and password for authenticity (verifies voter apparatus) generates a signature and signs the package and sends it back to the voter. The voter checks the signature and then sends the signature and the encrypted package to the counter. The counter decrypts the package and checks the signature, and the sums and posts the results (Pages 22-25 of Secure Electronic Voting Over the World Wide Web by Herschberg).

Referring to claims 10, 18, 24, 30, Herschberg discloses using threshold decryption (page 73, third paragraph).

## Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Benjamin E Lanier whose telephone number is 703-305-7684. The examiner can normally be reached on M-Th0 7:30am-5:00pm, F 7:30am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on (703)305-1830. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
